Education

University of Illinois Urbana-Champaign (UIUC)

Bachelor of Science in Computer Engineering, Minor in Statistics, James Scholar

Aug 2023 – May 2027

Urbana-Champaign, IL

Nanyang Technological University (NTU)

Summer Program: Data Science and Artificial Intelligence

June 2024 – July 2024

Singapore

- Gained hands-on experience with machine learning techniques and fundamental AI concepts.
- Developed skills in data handling, exploratory data analysis, and data visualization.

Relevant Coursework

- | | | | |
|--------------------|---------------------------|----------------------------|------------------------------|
| • Database Systems | • Artificial Intelligence | • Analog Signal Processing | • Digital Systems |
| • Data Structures | • Applied Machine | • Systems and | • Electronics |
| • Web Programming | Learning | Programming | • Probability and Statistics |

Experience

LevrX Technologies Inc.

May 2025 – Aug 2025

Software Engineering Intern

Troy, NY

- Built a Java Spring Boot-based Archiving Service to automate data retention and deletion across large databases.
- The Service saved over \$10,000 in data storage costs by archiving old records and reducing DB load across all schemas.
- Optimized slow stored procedures through performance testing, improving query speed by 40%.
- Built interactive business metrics dashboard using FME and Tableau, enabling real-time trend analysis.

InGO Electric

May 2023 – Aug 2023

Engineering Intern

Bangalore, India

- Provided technical support, resolving software and hardware issues for 50+ users.
- Improved customer support through enhancements to OpsPod tracking software, reducing response times.
- Implemented automated alerts in monitoring software, improving customer notifications.
- Analyzed scooter telemetry data to develop heat maps for optimal charging station locations.
- Recommended a battery inspecting station based on research into BMS and EV fires in India.

Projects

Sentiment Classifier — Python, Flask, Cloudflare Workers

Aug 2025 – Sep 2025

- Implemented a binary sentiment classifier for reviews using a Naive Bayes bag-of-words model with Laplace smoothing, achieving 89% accuracy on the dev set and 100% on custom test cases.
- Built a real-time web app with Flask and Cloudflare Workers, featuring confidence scoring with sub-50ms latency and 99.9% uptime.

JobGenie — AI-Powered Career Companion — Python, TF-IDF, SQL

Feb 2025 – May 2025

- Built an AI tool to automate internship searches by extracting resume features and matching with jobs using TF-IDF.
- Designed and managed a SQL database for user data, parsed resumes, job posts, and application history.
- Delivered personalized job recommendations and advanced filtering options.

15-Puzzle Solver — C++, Graph Search (A*, BFS)

Nov 2024 – Dec 2024

- Engineered a solver leveraging A* and BFS algorithms to traverse an implicit state graph.
- Developed a memory-efficient state representation and integrated Manhattan distance heuristics, achieving solution times up to 85% faster than conventional approaches.

AM Radio Receiver — Signal Processing, Electronics

Sep 2024 – Nov 2024

- Engineered a high-performance AM radio receiver with RF amplification, mixing, filtering, and demodulation, achieving a 25% boost in reception clarity.
- Designed and validated Envelope Detector, IF, and Audio Amplifier subsystems, resulting in a 30% improvement in signal-to-noise ratio.

Technical Skills

Languages: Python, Java, C/C++, SQL, R, JavaScript/TypeScript, HTML5/CSS, Verilog, SystemVerilog

Frameworks & Tools: Spring Boot, Flask, Node.js/Express, Maven, JUnit, Jira, TensorFlow, PyTorch

Frontend: React, Vite, Vue, Tailwind CSS, Framer Motion

Cloud/DevOps: AWS (EC2, S3), Docker, Git, Cloudflare Workers, CI/CD, Linux

Databases: PostgreSQL, MySQL, MongoDB, Neo4j, Amazon Redshift, RDS/Aurora

Data/Analytics & Hardware: Tableau, FME, R, Data Visualization, FPGA
